

Gas detection.

Portable gas detectors

Portable gas detectors are used for personal protection and should be clipped-on when entering areas with gas related risks. If the unit detects dangerous level of the measured gas, the portable gas detector will show you real time reading and both audio and visual alarm will activate. AGA is distributor for a limited range of portable gas detectors manufactured by Crowcon. For technical information see datasheets and operational manuals from Crowcon.

Description	Mat. no
Portable gas detector Clip SGD O ₂ 19%/23.5%	336424
Portable gas detector Clip SGD H ₂ S 5/10 ppm	336423
Portable gas detector Clip SGD CO 30/100 ppm	336421
Portable gas detector Crowcon Tetra, O ₂ , H ₂ S/CO	336426

Fixed gas detectors

Fixed gas detectors are used for personal protection and should be fixed in areas with gas related risks, such as CO₂ enrichment or oxygen depletion. If the unit detects dangerous level of the measured gas, the fixed gas detector will activate both audio and visual alarm, at main unit and at the repeater placed by the door outside the room, preventing people from entering a dangerous atmosphere. AGA is distributor for a limited range of fixed gas detectors manufactured by Analox. For technical information see datasheets and operational manuals from Analox.
